

**BUSINESS METHOD FOR COMPARISON SHOPPING WITH DYNAMIC PRICING
OVER A NETWORK**

ABSTRACT

A user is provided with access to a preferred online store through one or more networks. The
5 online store has one or more products each with a product description and a price. The product
description and price are provided to the user. A computer receives one or more selection requests
for one or more of the products (selected products) from the user. The user is provided with one
or more bid conditions for the selected product which the user selects from. The user is then
provided one or more second bids. Each of the second bids originates from one or more other
10 stores that participated in an auction and each of the second bids conforms to the bid conditions
selected by the user.
